DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Malmberg (033) or Gifford (971) in view of Lerner (438).

Malmberg (033) or Gifford (971) both disclose the idea of irradiating a substance with a **low voltage light source** such as a **diode** (Malmberg) to produce fluorescent radiation emitted from said substance, and means to detect such emission. For example, see Figure 1, col.1, lines 47-56, col.2, first paragraph of Malmberg; and col.6, last paragraph of Gifford.

Art Unit: 2881

As seen in the secondary reference to Lerner, the use of low voltage lamps contained within a housing that can be power by batteries has been well known in the art. Furthermore, Lerner discloses that one may also utilize a reflective means in said housing behind said source and a color filter means within said housing (col.4, lines 34-35 and col.4, line 25).

Therefore, it would have been obvious to one of ordinary skill in the art that said primary references can be modified according to the secondary teaching of Lerner to further improve the efficiency of the projected radiation from said low voltage light sources, if so desired.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Macbride has been cited to show a similar device (note col.9, line 14).
